# Why food processing matters to understand diet and health in the 21<sup>st</sup> century

- Diet and health: a complex relationship
- The role of food processing on this relationship
- **Evidence on the impact of ultra-processed foods on diet quality and health**
- Policy implications

# Narrow and broad views of health

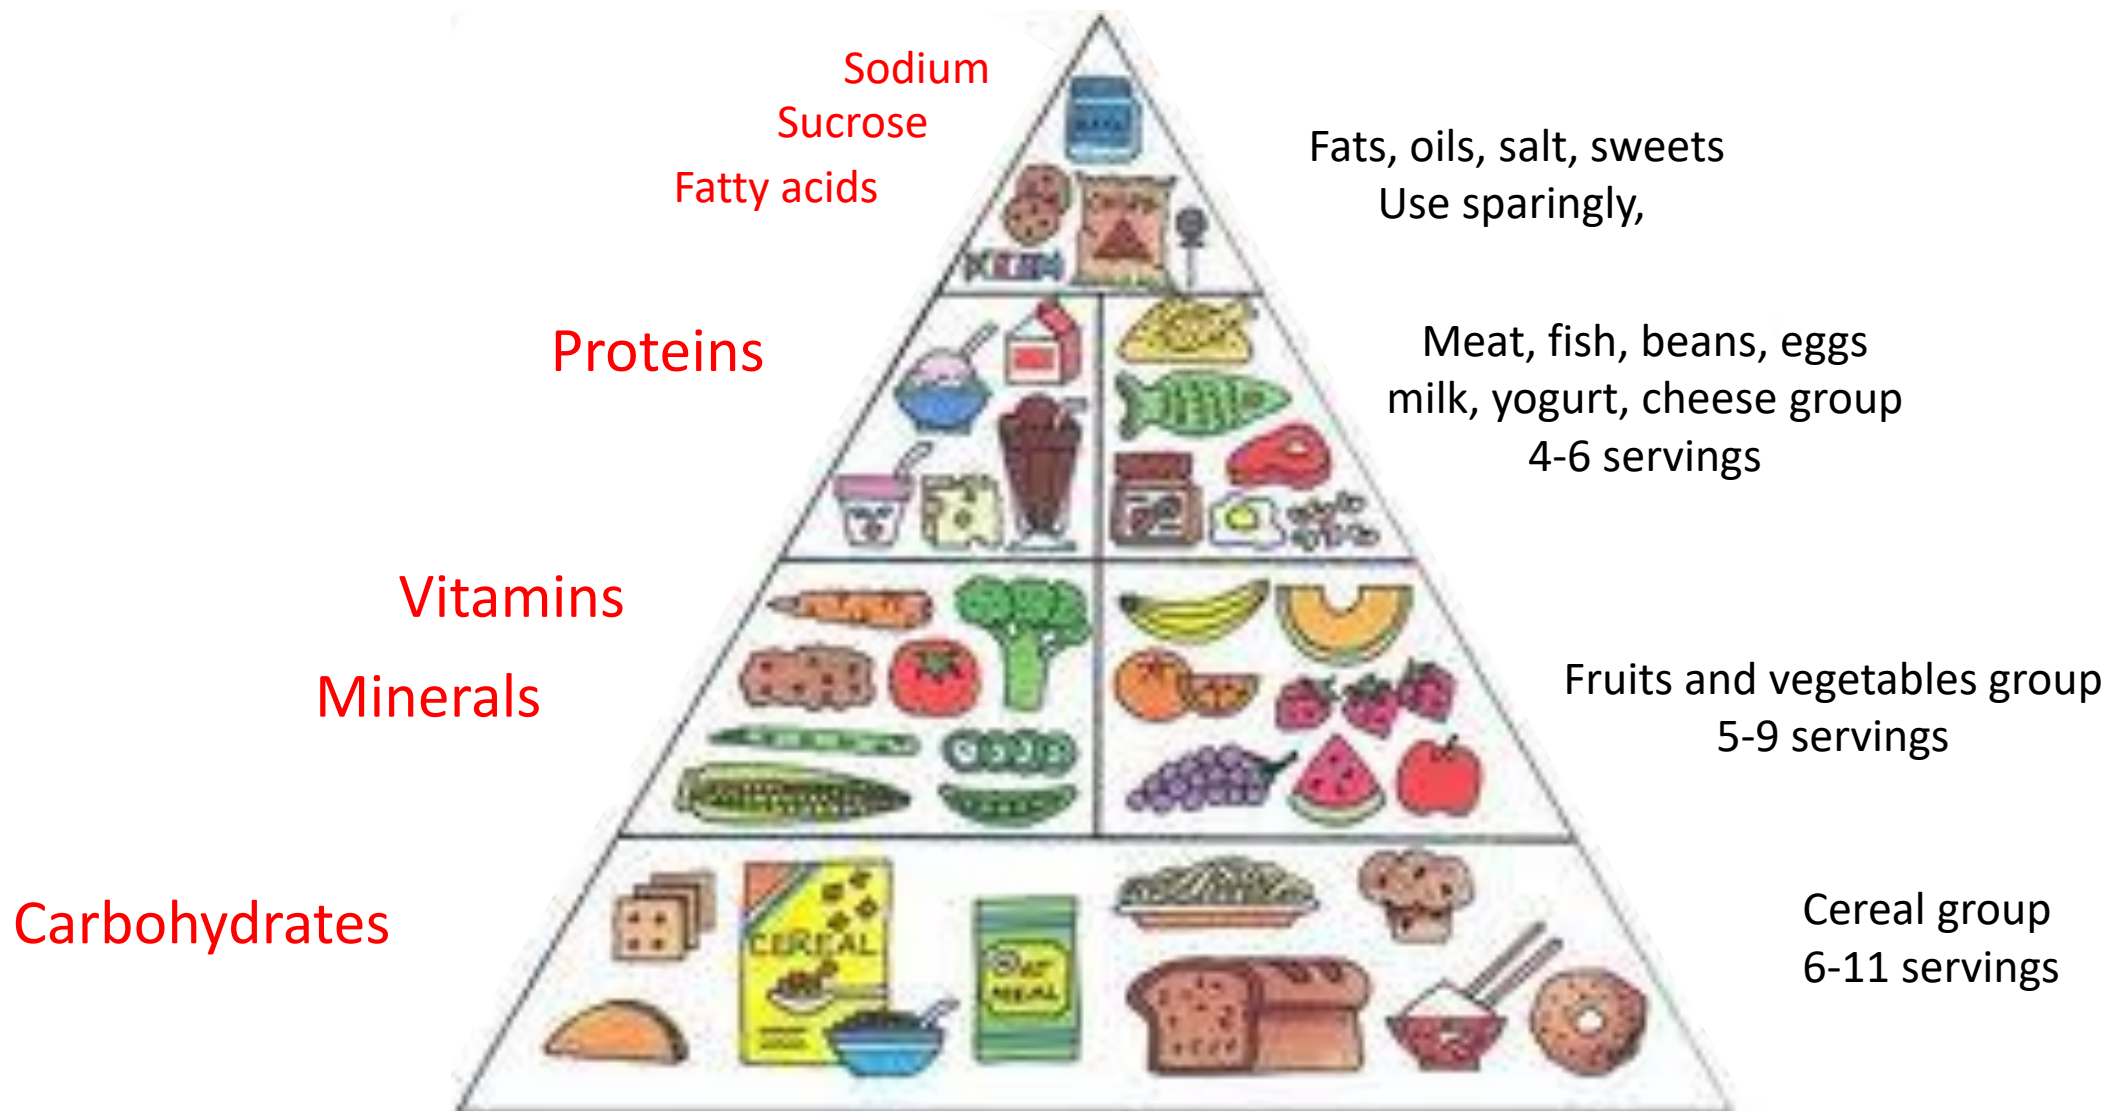

*Health as the mere absence of disease*

VS.

*Health as a state of complete physical, mental and social well-being\**

\*Preamble to the Constitution of the World Health Organization as adopted by the International Health Conference, New York, 19 June - 22 July 1946

# There is also a narrow view on diet ...

# For 'nutritionism', Soylent would be an option for 'healthy diets'

# HOW SOYLENT WORKS

## Soylent vs. Food

Based on a 30-year-old man,  
6 feet, 165 pounds, physically active  
30 to 60 minutes a day

### SOYLENT

1 powdered pouch =  
2,000 calories (2 scoops)  
1/4 pouch  
(500 calories) = 1 meal

#### What's in it?

Brown rice, oat flour,  
isomaltulose, potato starch, rice  
starch, cellulose, sucralose, high  
oleic sunflower oil, soy lecithin,  
flaxseed, safflower oil, algal oil,  
blend of vitamins and minerals

#### Carbohydrates

51 grams  
(4 grams fiber,  
11 grams sugar)

#### Fat

24 grams  
(3 grams saturated fat)

#### Protein

21 grams  
Plus micronutrients like:  
Potassium, Vitamin C,  
Copper, Sodium,  
Calcium

### FOOD

Daily plan of 2,800 calories

Grains: 10 ounces  
Bread, pasta, cereals

Vegetables: 3.5 cups  
Dark leafy greens,  
beans, peas, lentils,  
potatoes, corn, taro,  
squash, carrots,  
peppers

Fruits: 2.5 cups  
Apples, melons,  
berries, citrus and  
100% fruit juice

#### Dairy: 3 cups

Milk, cheese,  
ice cream,  
yogurt

Protein: 7 ounces  
Meats, poultry, eggs, beans,  
fish, nuts

*Nutrients*

*Foods*  
*(more than nutrients!)*

*Meals*  
*(more than foods!)*

*Eating modes*  
*(when, where, how?)*

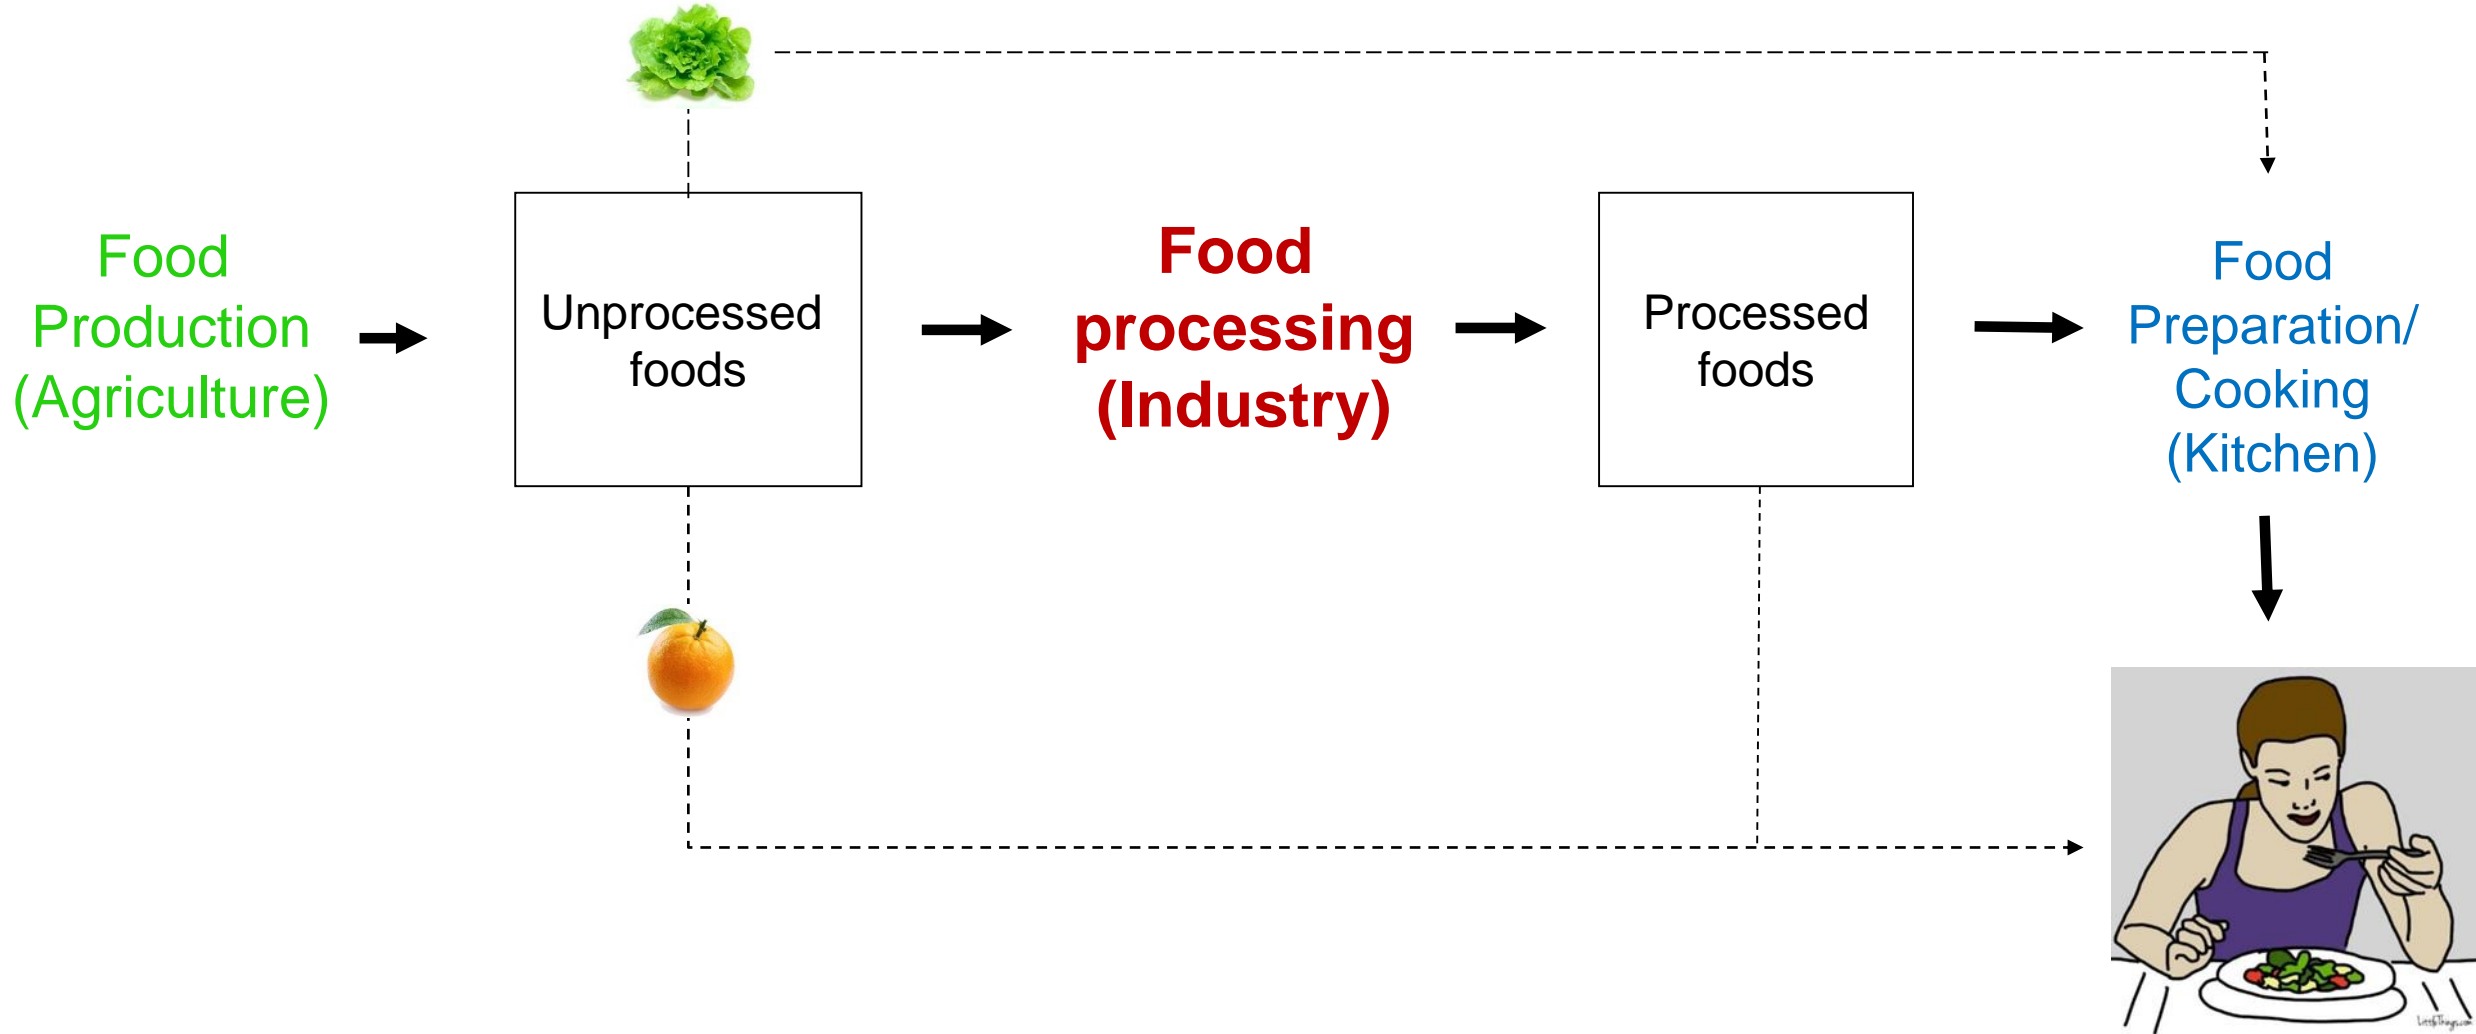

Four elements  
in diet influence  
health:

# Why food processing matters to understand diet and health in the 21<sup>st</sup> century

- Diet and health: a complex relationship
- The role of food processing on this relationship
- **Evidence on the impact of ultra-processed foods on diet quality and health**
- Policy implications

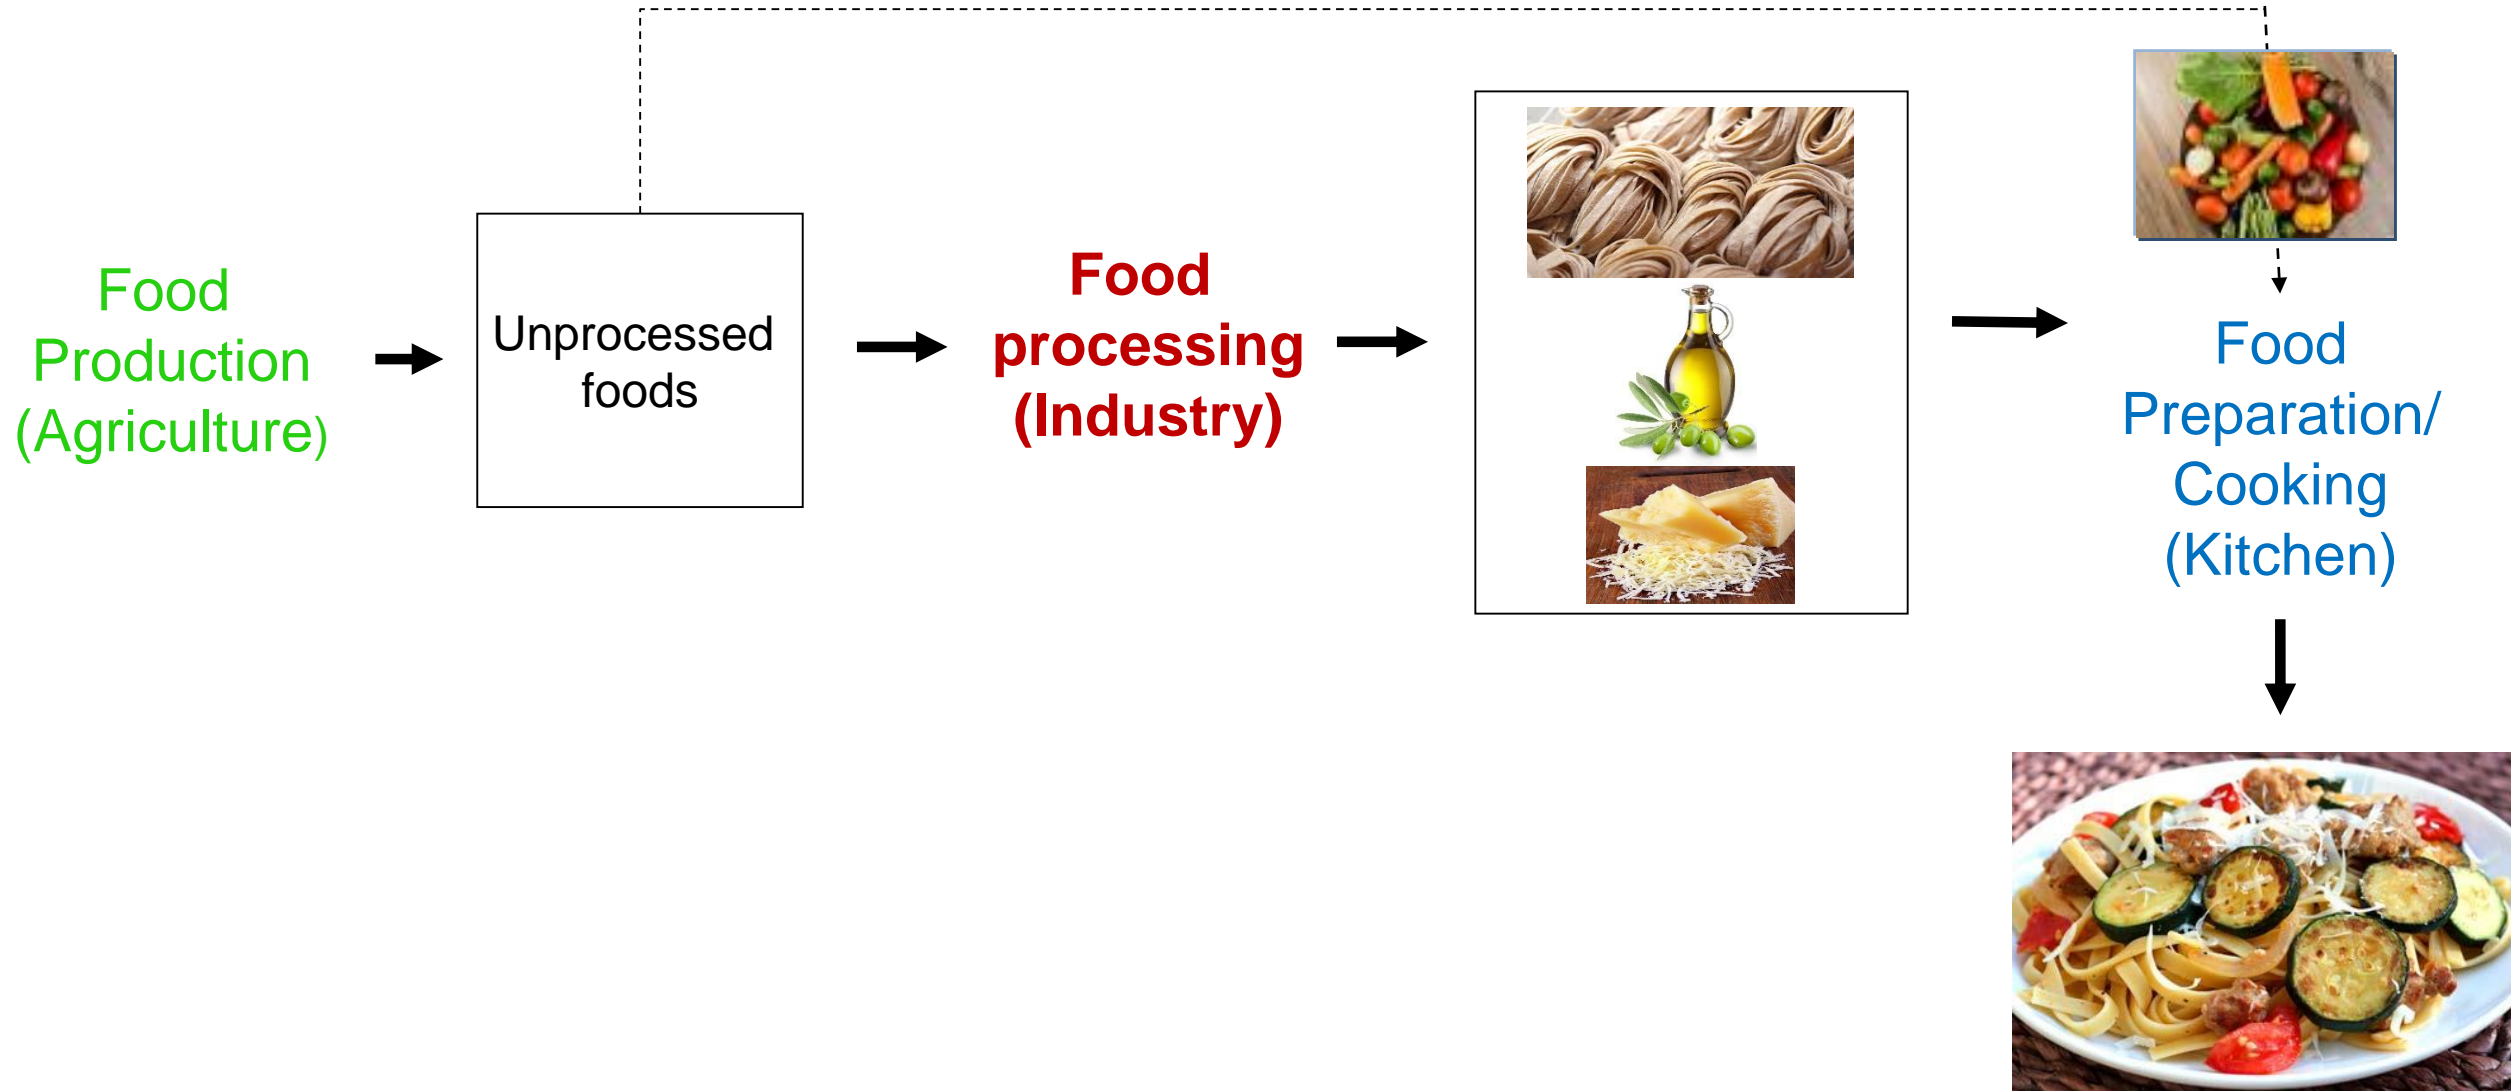

# Food processing within the food system

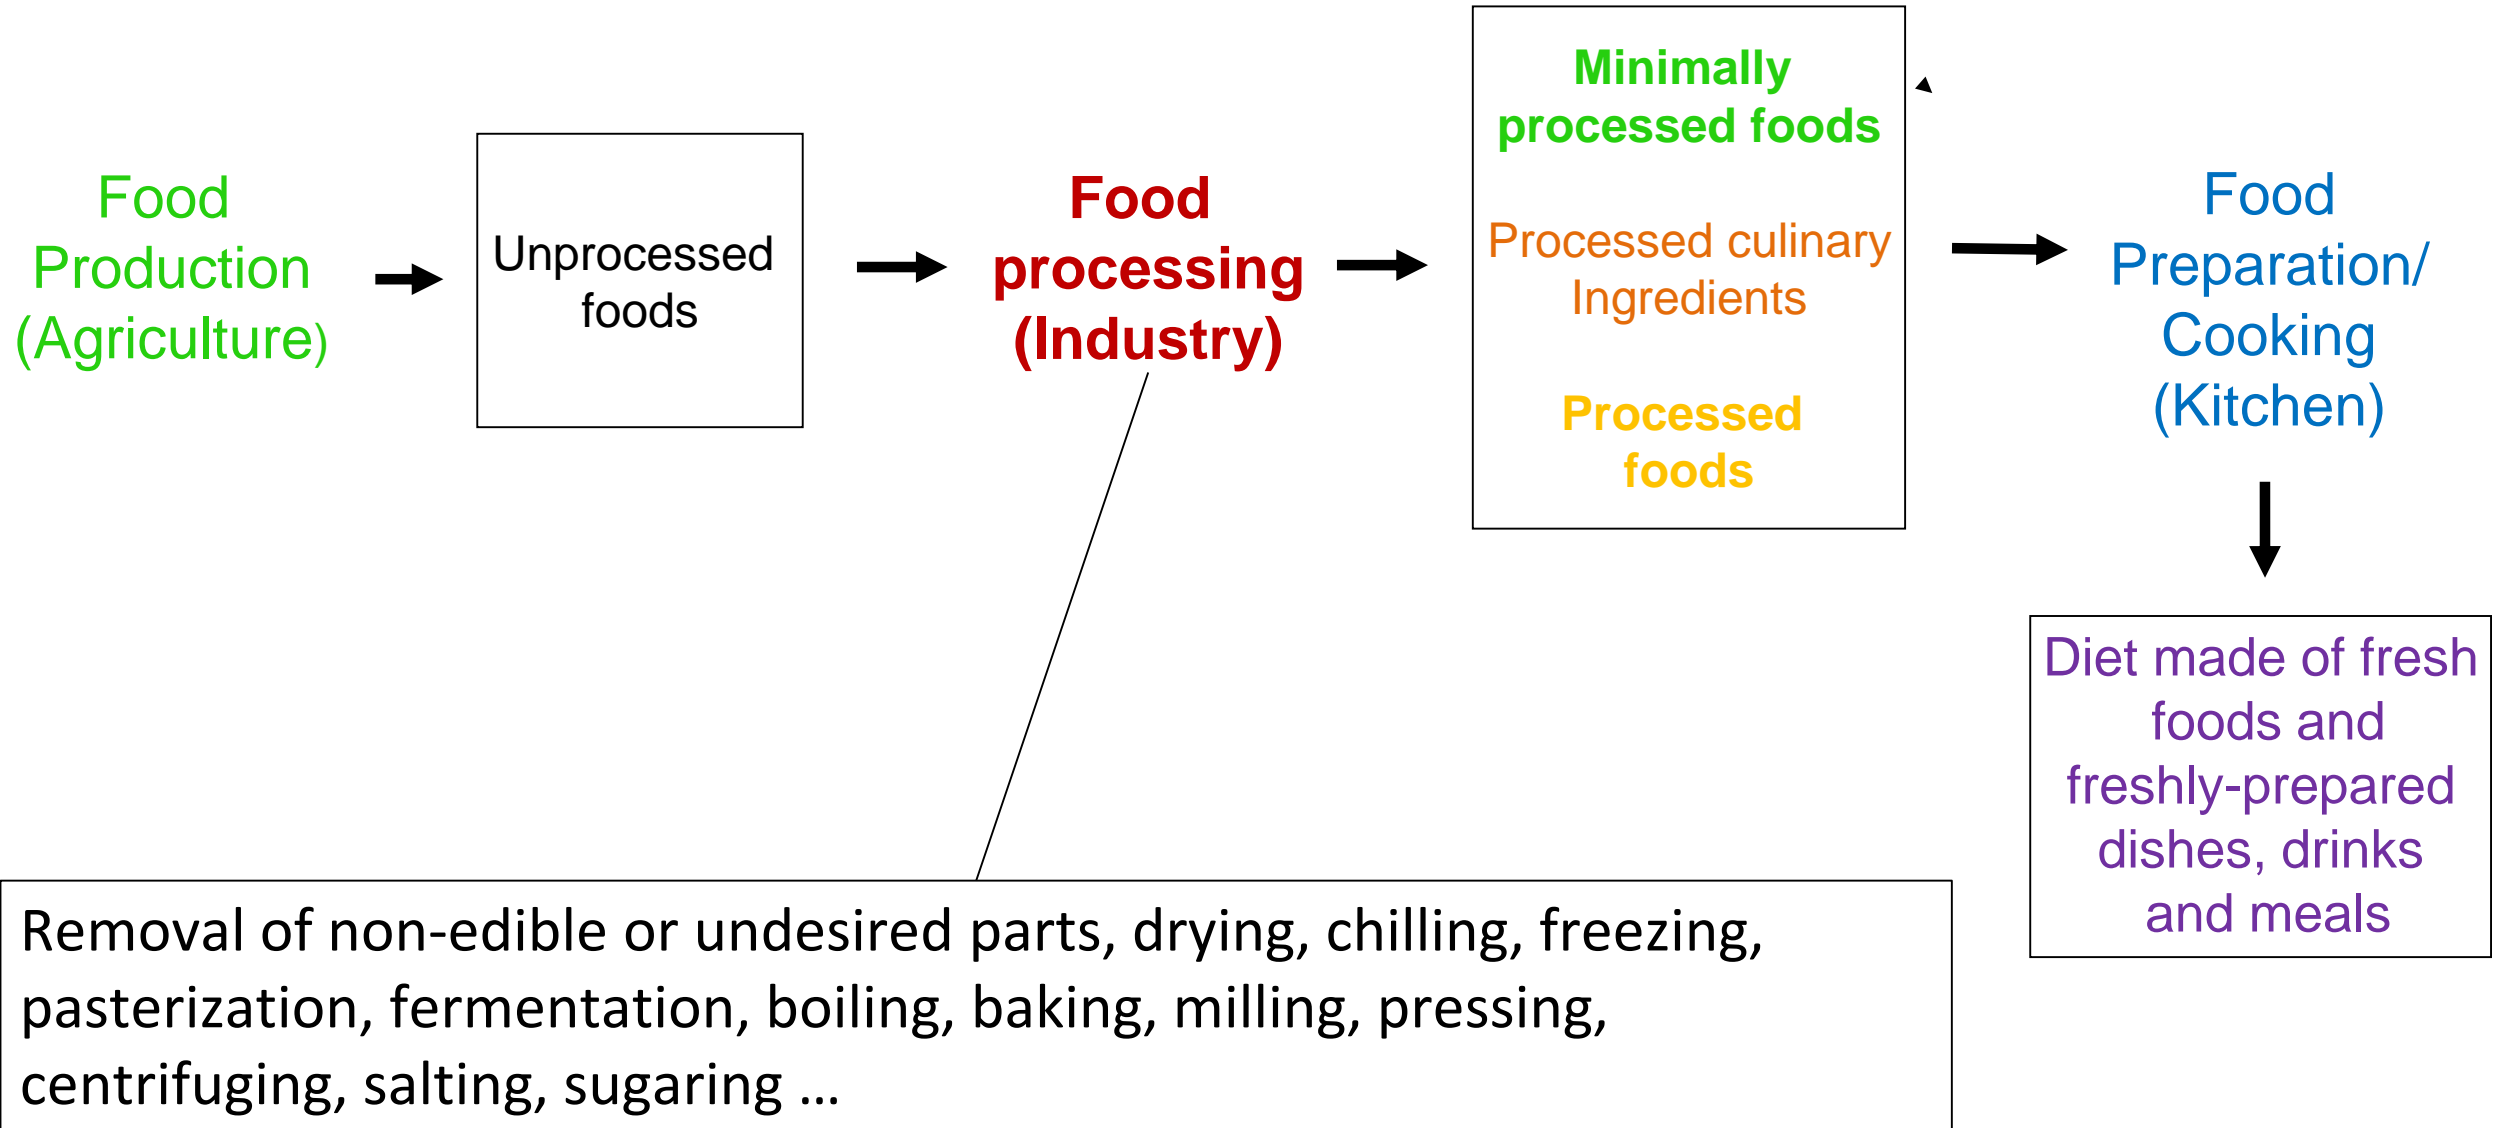

*What is the purpose of food processing?*

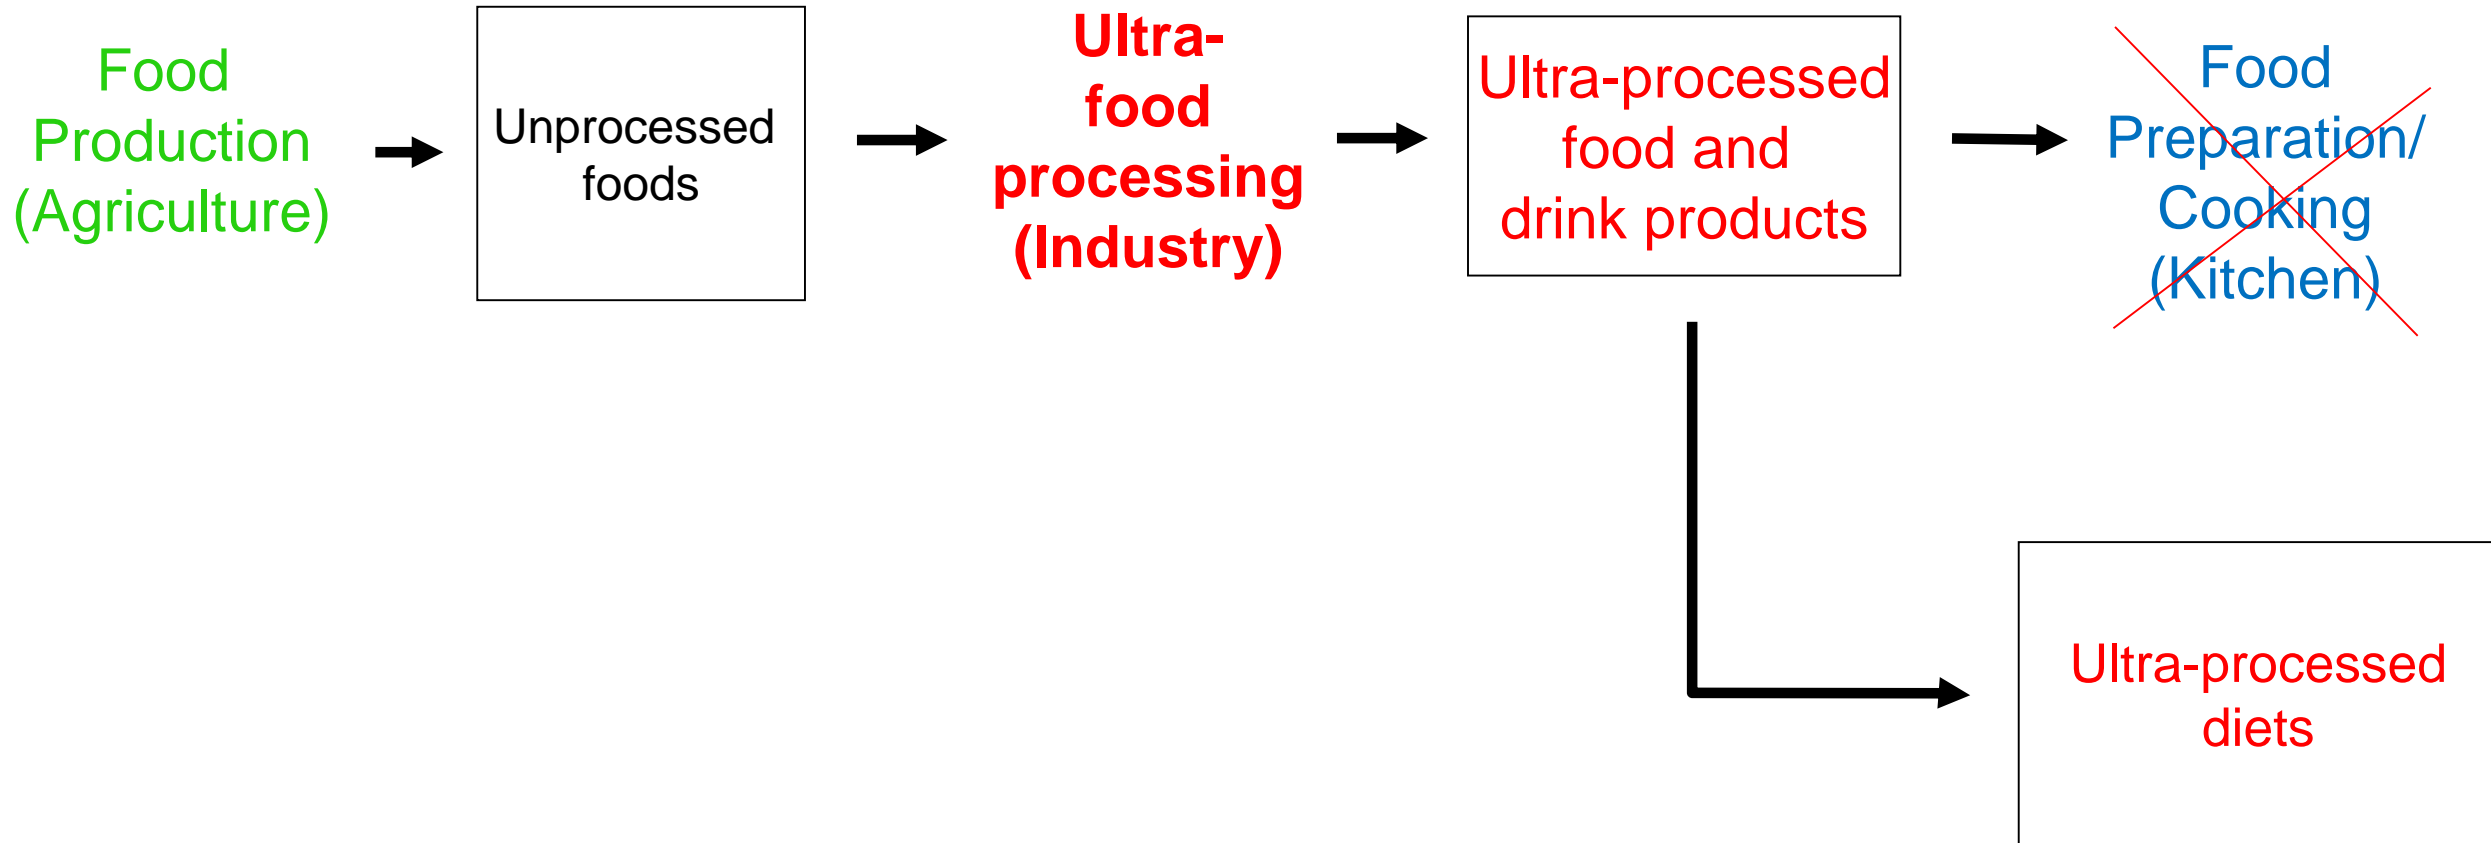

Food processing to increase **food** duration, to make easier/more diverse **food** preparation, or to modify/enhance **food** sensorial properties

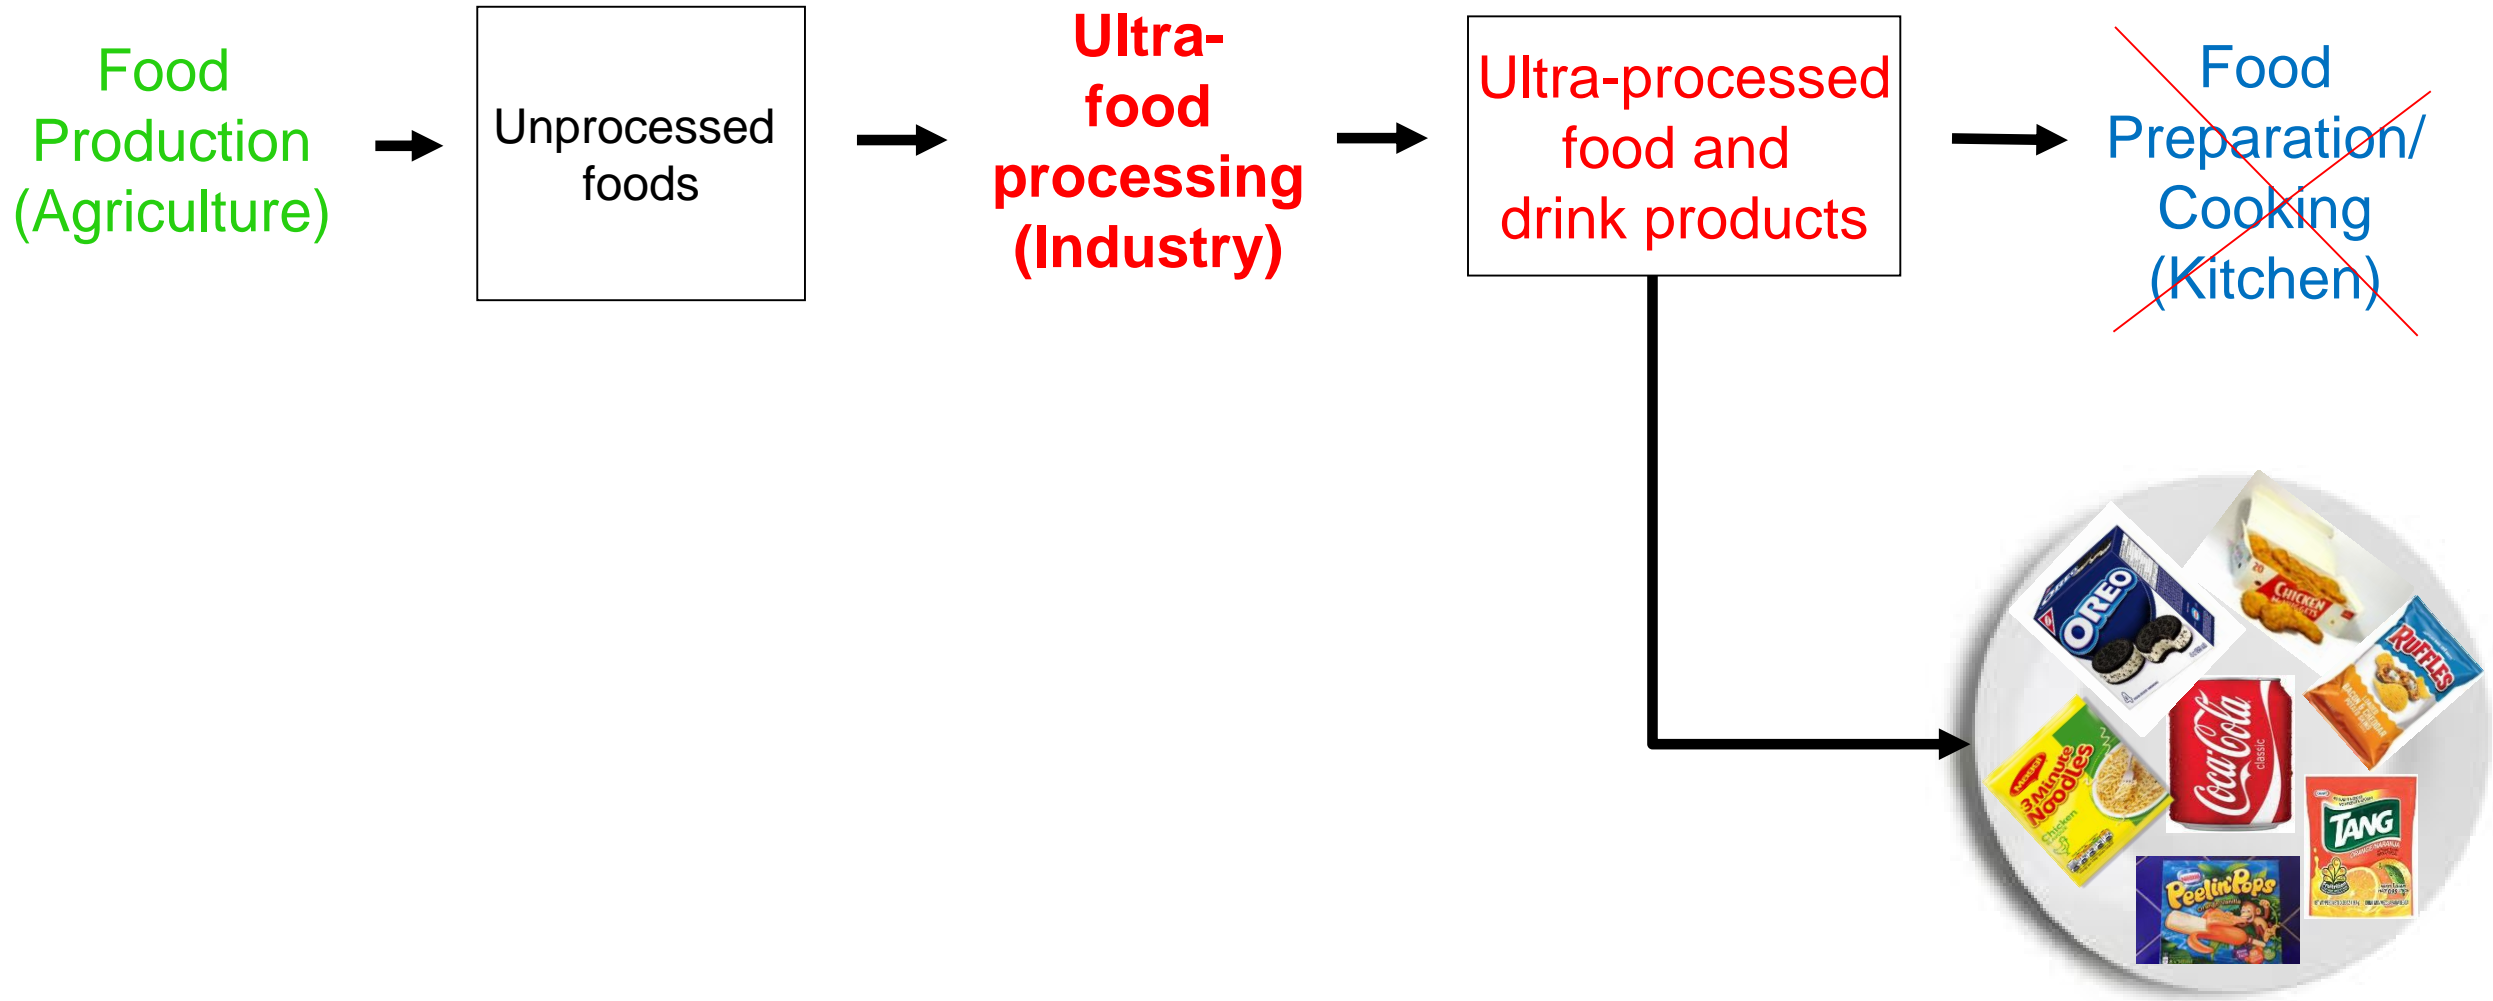

# Processes used in the manufacture of NOVA groups 1 to 3

Food processing aiming convenient (ready-to-eat or heat, imperishable), low cost, and tasteful products liable to replace all other NOVA groups

Food processing aiming convenient (ready-to-eat or heat, imperishable), relatively cheap and tasteful products liable to replace all other NOVA groups

# Ultra-processed foods are manufactured and marketed to replace fresh foods and freshly prepared drinks, dishes and meals

# What processes are involved with food ultra-processing?

Extraction of oils/fats/sugar/starches/protein contained in foods

Chemical modifications of substances obtained from foods (hydrogenation ...)

Assembly of unmodified and modified food substances (extrusion, deep frying ...)

Use of cosmetic additives (flavours, colours, emulsifiers ...)

Sophisticated packaging often using synthetic materials.

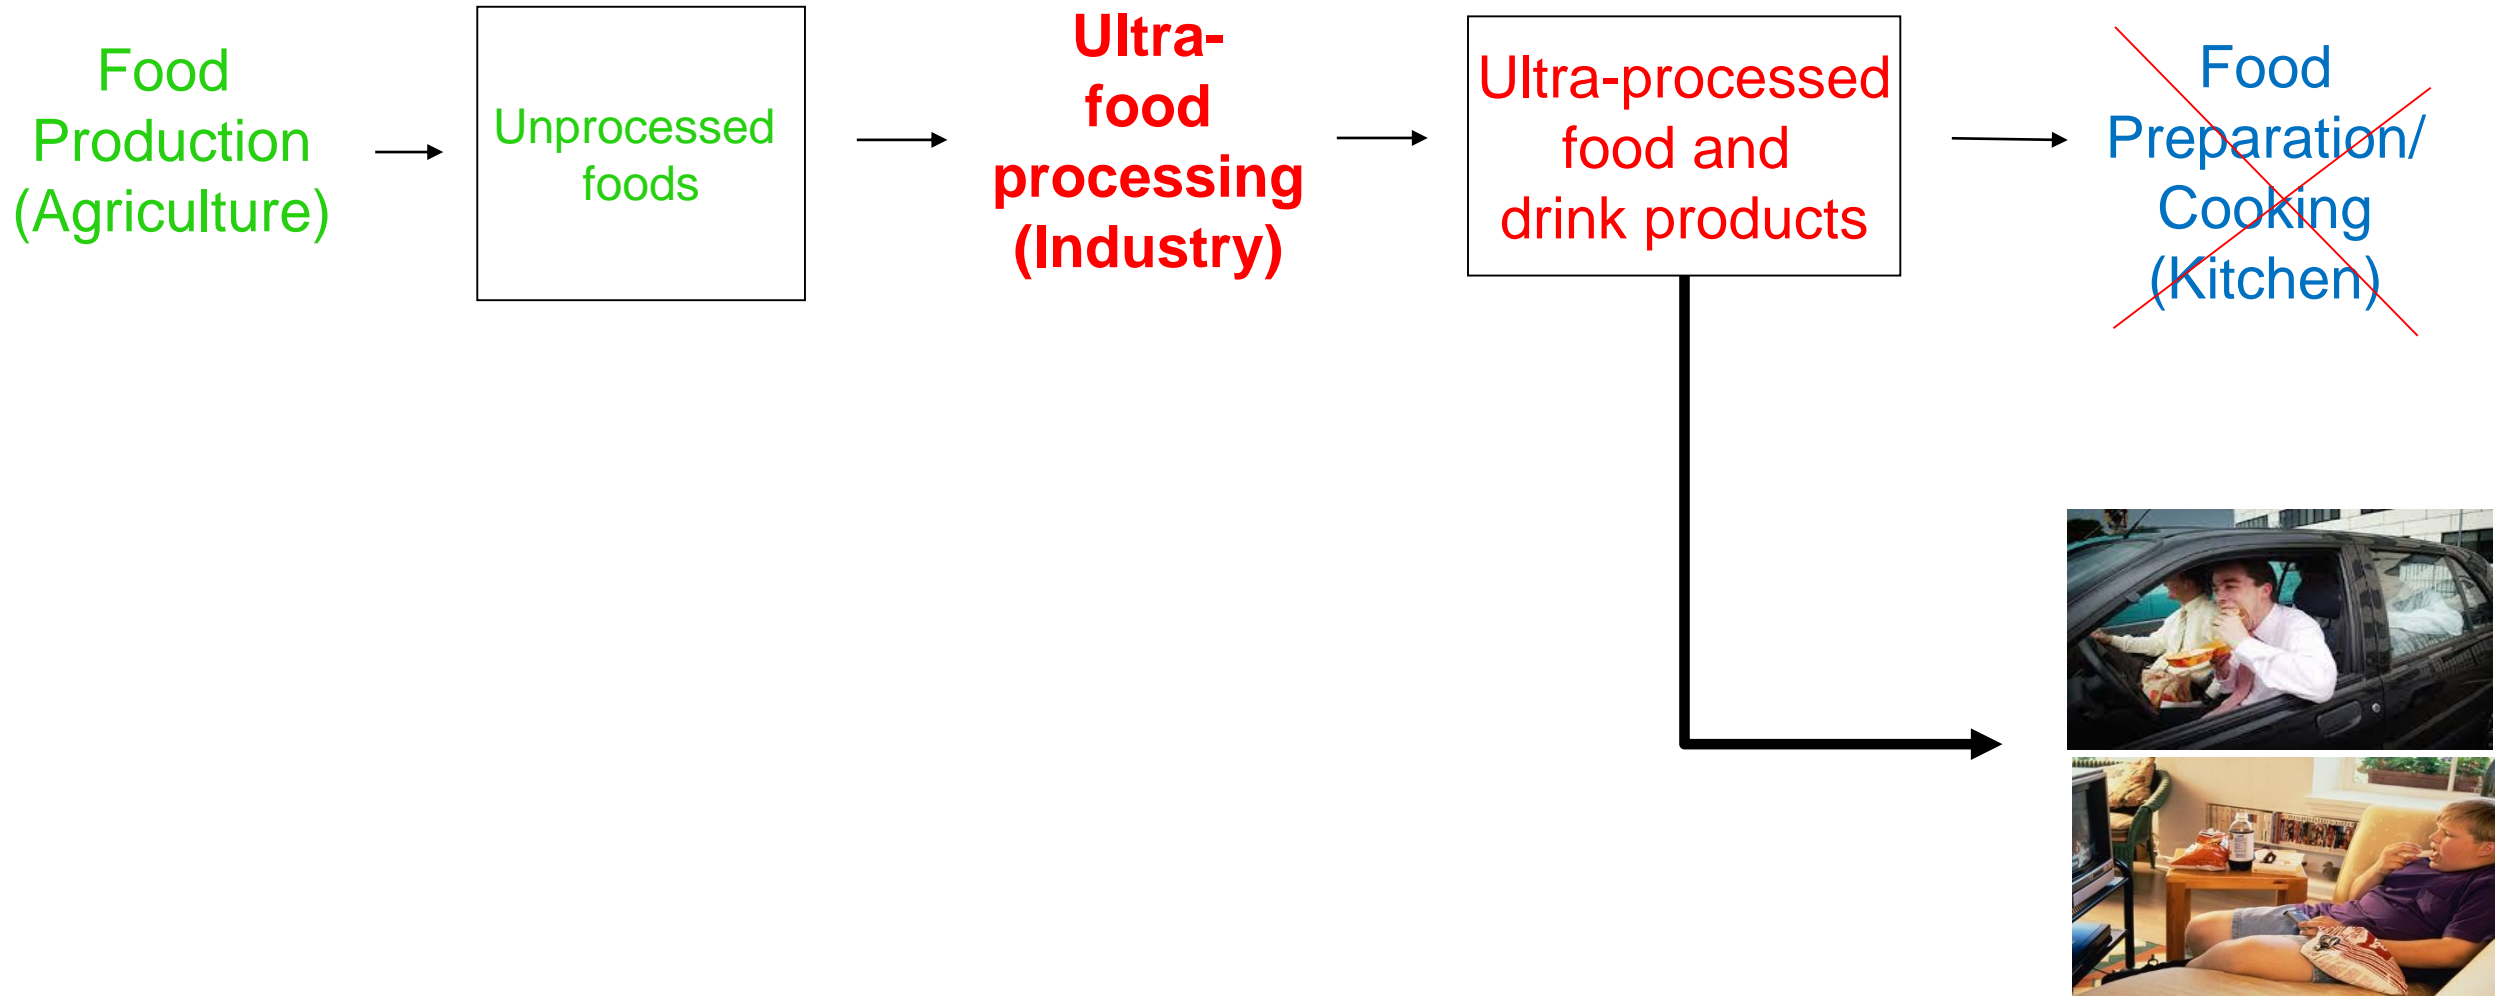

# Most basic ingredients of ultra-processed foods come from a few-high yield plant foods and intensive livestock farming

# NOVA group 4 favors unhealthy eating modes

# NOVA groups 1 to 3 favor healthy eating modes

# Why food processing matters to understand diet and health in the 21<sup>st</sup> century

- Diet and health: a complex relationship
- The role of food processing in this relationship
- **Evidence on the impact of ultra-processed foods on diet quality and health**
- Policy implications

# NOVA food groups

# Examples

## 1) Unprocessed or minimally processed foods

## 2) Processed culinary ingredients

## 3) Processed foods

## 4) Ultra-processed foods

Formulations resulting from a sequence of processes that include the fractioning of whole foods into substances, the modification and recombination of these substances, use of of cosmetic additives, and often sophisticated packaging, all aiming to obtain durable, ready-to-consume, hyper-palatable, and highly profitable products with potential to replace all other food groups

# Articles in PubMed with the term 'ultra-processed'

Why food processing matters to understand diet and health in the 21<sup>st</sup> century

- **The impact of ultra-processed foods on:**

- **Diet quality**

- **NCDs**

# Dietary share of ultra-processed foods in 8 countries (% of total energy intake)

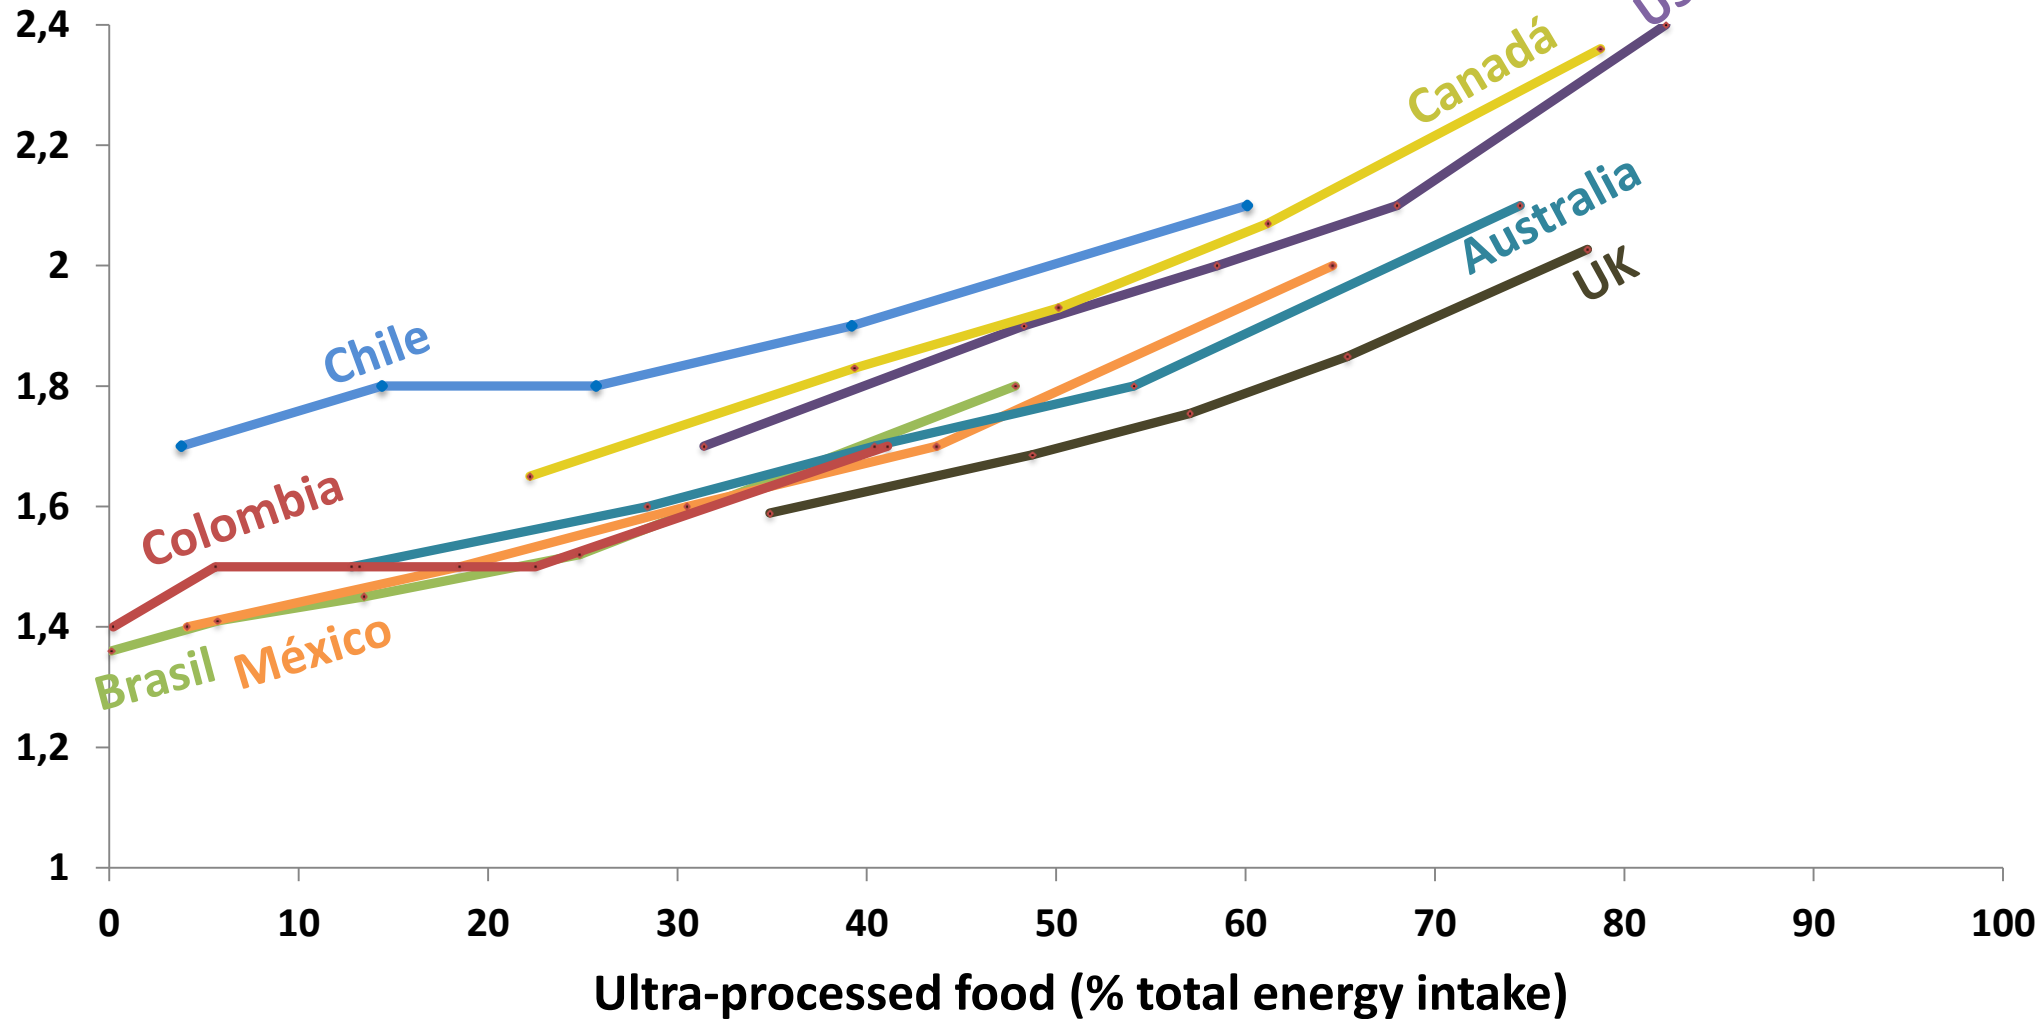

# Quintiles (Q) of the dietary share of ultra-processed foods (% of total energy intake)

# Diet quality according to quintiles of ultra-processed food intake

## NOVA multi-country study, 2005-2014.

(% total energy intake)

# Diet quality according to quintiles of ultra-processed food intake

NOVA multi-country study, 2005-2014.

**Fiber**  
(g/1,000 kcal)

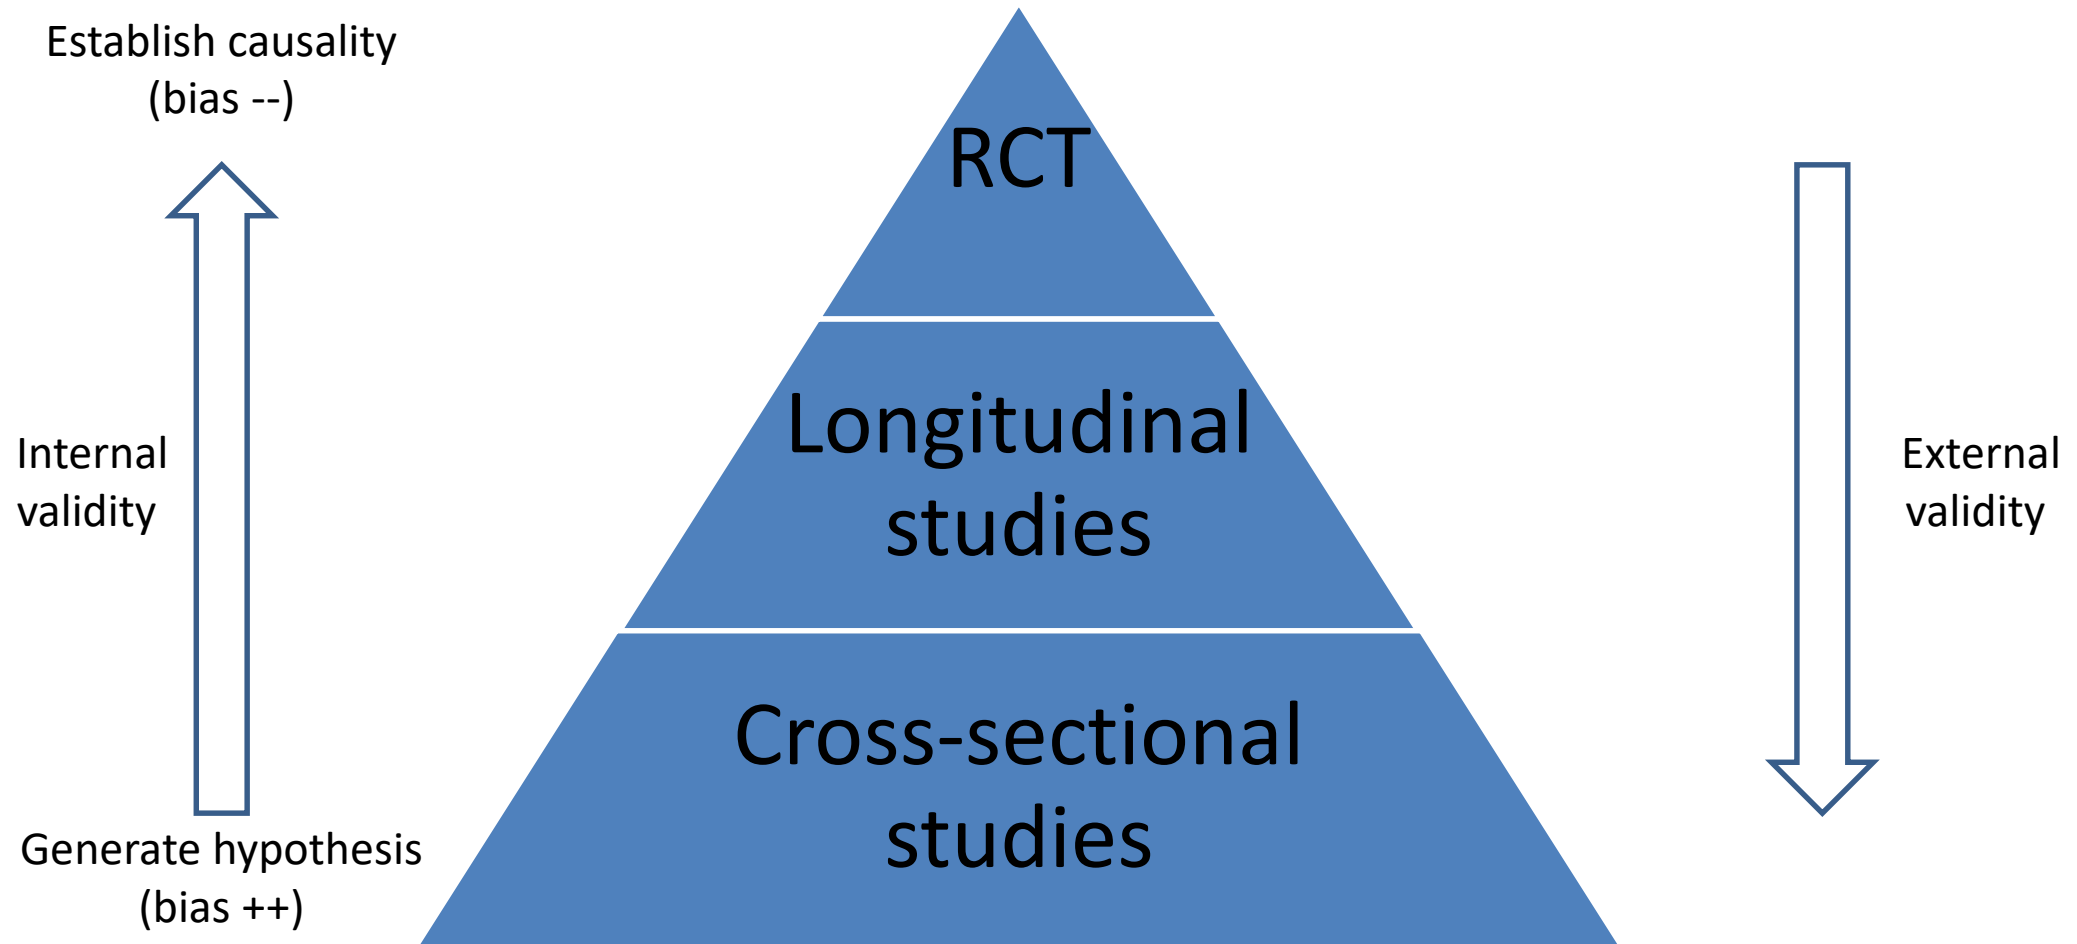

## Potentially harmful UPF attributes other than their unbalanced nutrient profile

- **'Acellular' nutrients and additives and their effect on microbiome** (Zinocker & Lindseth 2018)
- **Absence or low concentration of bioactive compounds** (Martinez-Steele & Monteiro 2017)
- **High glycemic index and low satiety** (Fardet 2016)
- **Hyper-palatability** (Kessler 2009; Brownell 2012; Moss 2013; Ifland 2018)
- **Mindless eating** (Cohen & Farley 2008)
- **Aggressive and sophisticated marketing**

# Why food processing matters to understand diet and health in the 21<sup>st</sup> century

- **The impact of ultra-processed foods on:**
  - Diet quality
  - **NCDs**

## Ultra-Processed Diets Cause Excess Calorie Intake and Weight Gain: An Inpatient Randomized Controlled Trial of *Ad Libitum* Food Intake

### Graphical Abstract

### Authors

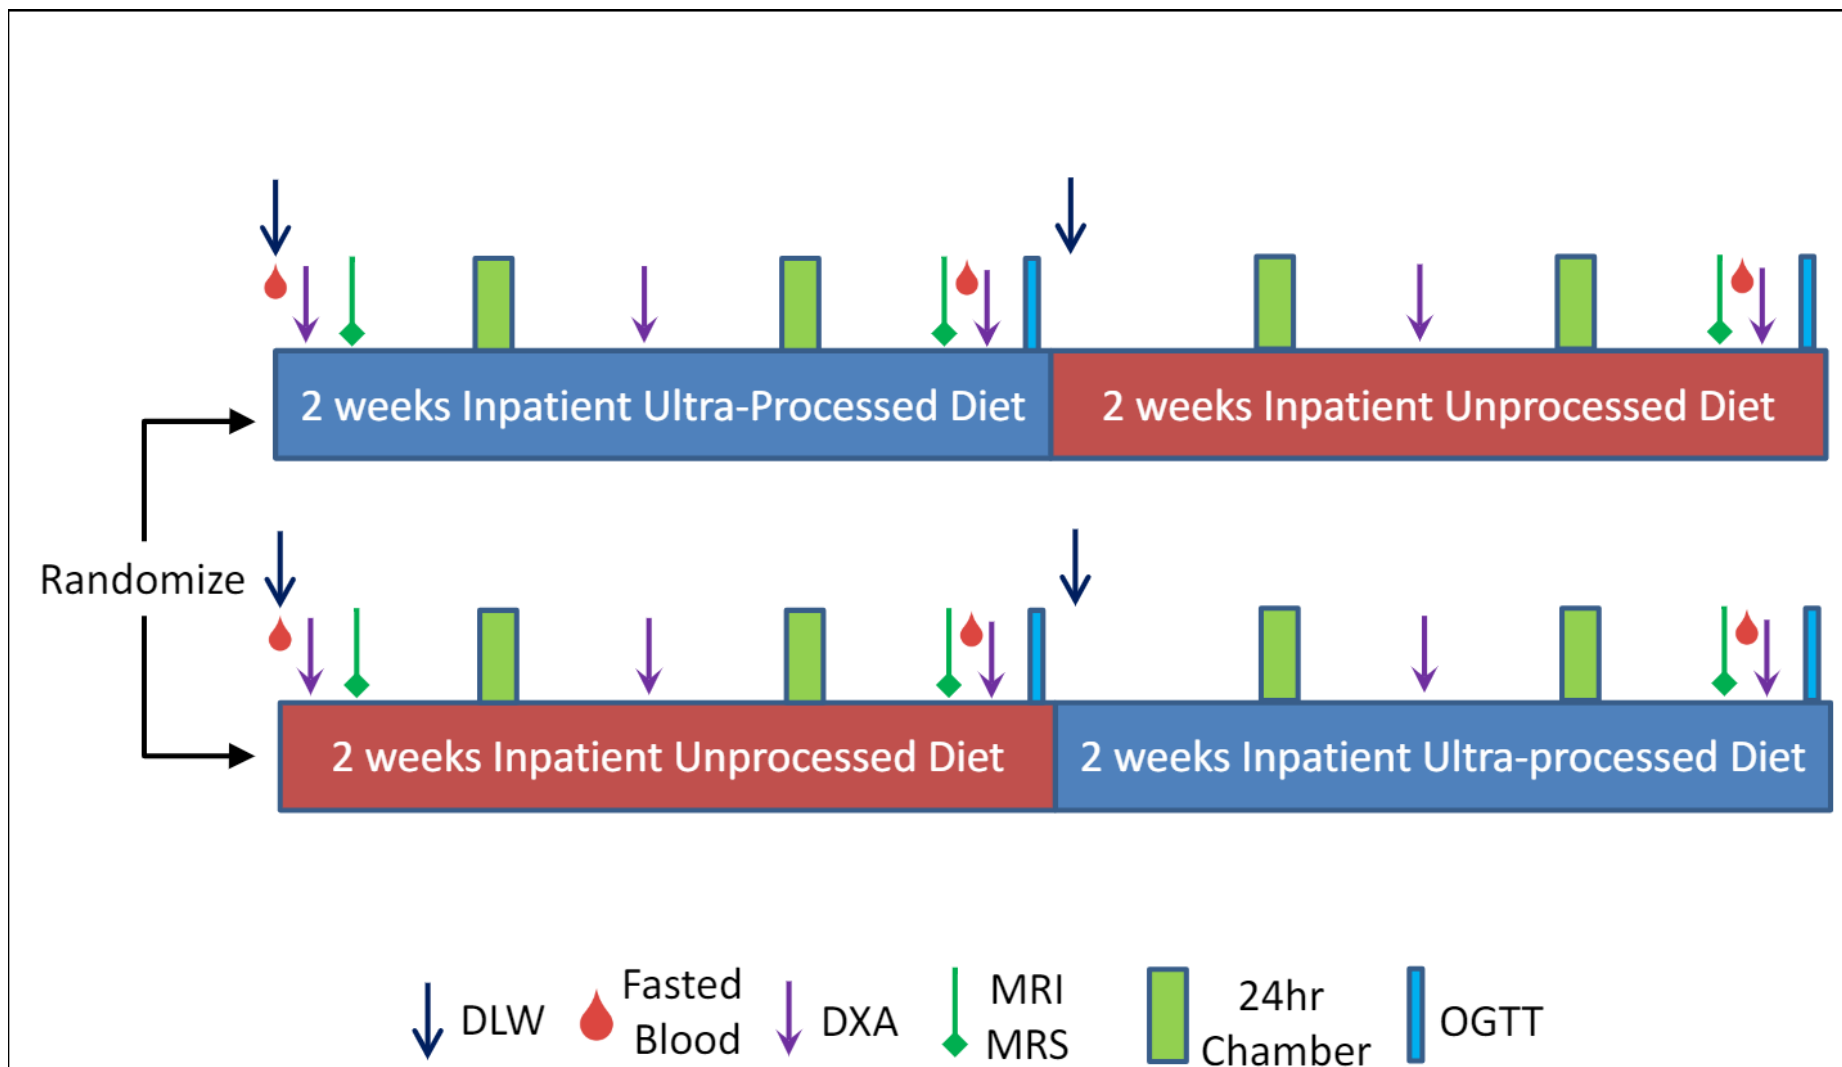

Kevin D. Hall, Alexis Ayuketah, Robert Brychta, ..., Peter J. Walter, Shanna Yang, Megan Zhou

### Correspondence

kevinh@nih.gov

### In Brief

Hall et al. investigated 20 inpatient adults who were exposed to ultra-processed versus unprocessed diets for 14 days each, in random order. The ultra-processed diet caused increased *ad libitum* energy intake and weight gain despite being matched to the unprocessed diet for presented calories, sugar, fat, sodium, fiber, and macronutrients.

**Overview of the study design.** Twenty adults were confined to metabolic wards where they were randomized to consume either an ultra-processed or unprocessed diet for 2 consecutive weeks followed immediately by the alternate diet.

## Ultra-processed Menu

### Day 2

#### Breakfast

Croissant (Chef Pierre)

Margarine (Glenview Farms)

Turkey sausage (Ember Farms)

Blueberry yogurt (Yoplait) with NutriSource fiber

## Non ultra-processed Menu

### Day 2

#### Breakfast

Scrambled egg (made from fresh eggs)

Hash brown potatoes (potato, garlic, paprika (Simply Organic), ground turmeric (McCormick), cream (Stoneyfield) and onions)

Salt and Pepper (Monarch)

## Ultra-processed Menu

### Day 4

#### Lunch

Hot dog (Patuxent Farms) on bun (Hilltop Hearth) with ketchup (Heinz) and yellow mustard (Monarch)  
Baked potato chips (Lay's)  
Cranberry juice (Sun Cup) with NutriSource fiber  
Blueberry yogurt (Yoplait) with NutriSource fiber

## Non ultra-processed Menu

### Day 4

#### Lunch

Baked cod filet (Harbor Banks) with fresh squeezed lemon juice  
Baked russet potato with olive oil  
Steamed broccoli with olive oil and garlic  
Side salad (green leaf lettuce, tomatoes, cucumber and carrots)  
Vinaigrette (balsamic vinegar (Nature's Promise) and olive oil)  
Salt and Pepper (Monarch)

## Ultra-processed Menu

### Day 7

#### Dinner

Peanut butter (Monarch) and jelly (Monarch) sandwich on white bread (Ottenberg)  
2% milk (Cloverland) with NutriSource fiber  
Baked Cheetos (Frito-Lay)  
Graham crackers (Nabisco)  
Chocolate pudding (Snack Pack) with NutriSource fiber

## Non ultra-processed Menu

### Day 7

#### Dinner

Penne pasta (Barilla) primavera (olive oil, garlic, pinto beans (cooked from dried), spinach, basil, tomatoes)  
Side salad (green leaf lettuce, baby carrots, broccoli)  
Vinaigrette (red wine vinegar (Giant) and olive oil)  
Salt and Pepper (Monarch)  
Grapes

## Ultra-processed Menu

### *Daily Snacks*

Baked Potato Chips (Lay's), Dry Roasted Peanuts (Planters), Cheese & Peanut Butter Sandwich Crackers (Keebler), Goldfish Crackers (Pepperidge Farm), Applesauce (Lucky Leaf).

## Non ultra-processed Menu

### *Daily Snacks*

Fresh oranges and apples, raisins (Monarch), raw almonds (Giant), chopped walnuts (Diamond)

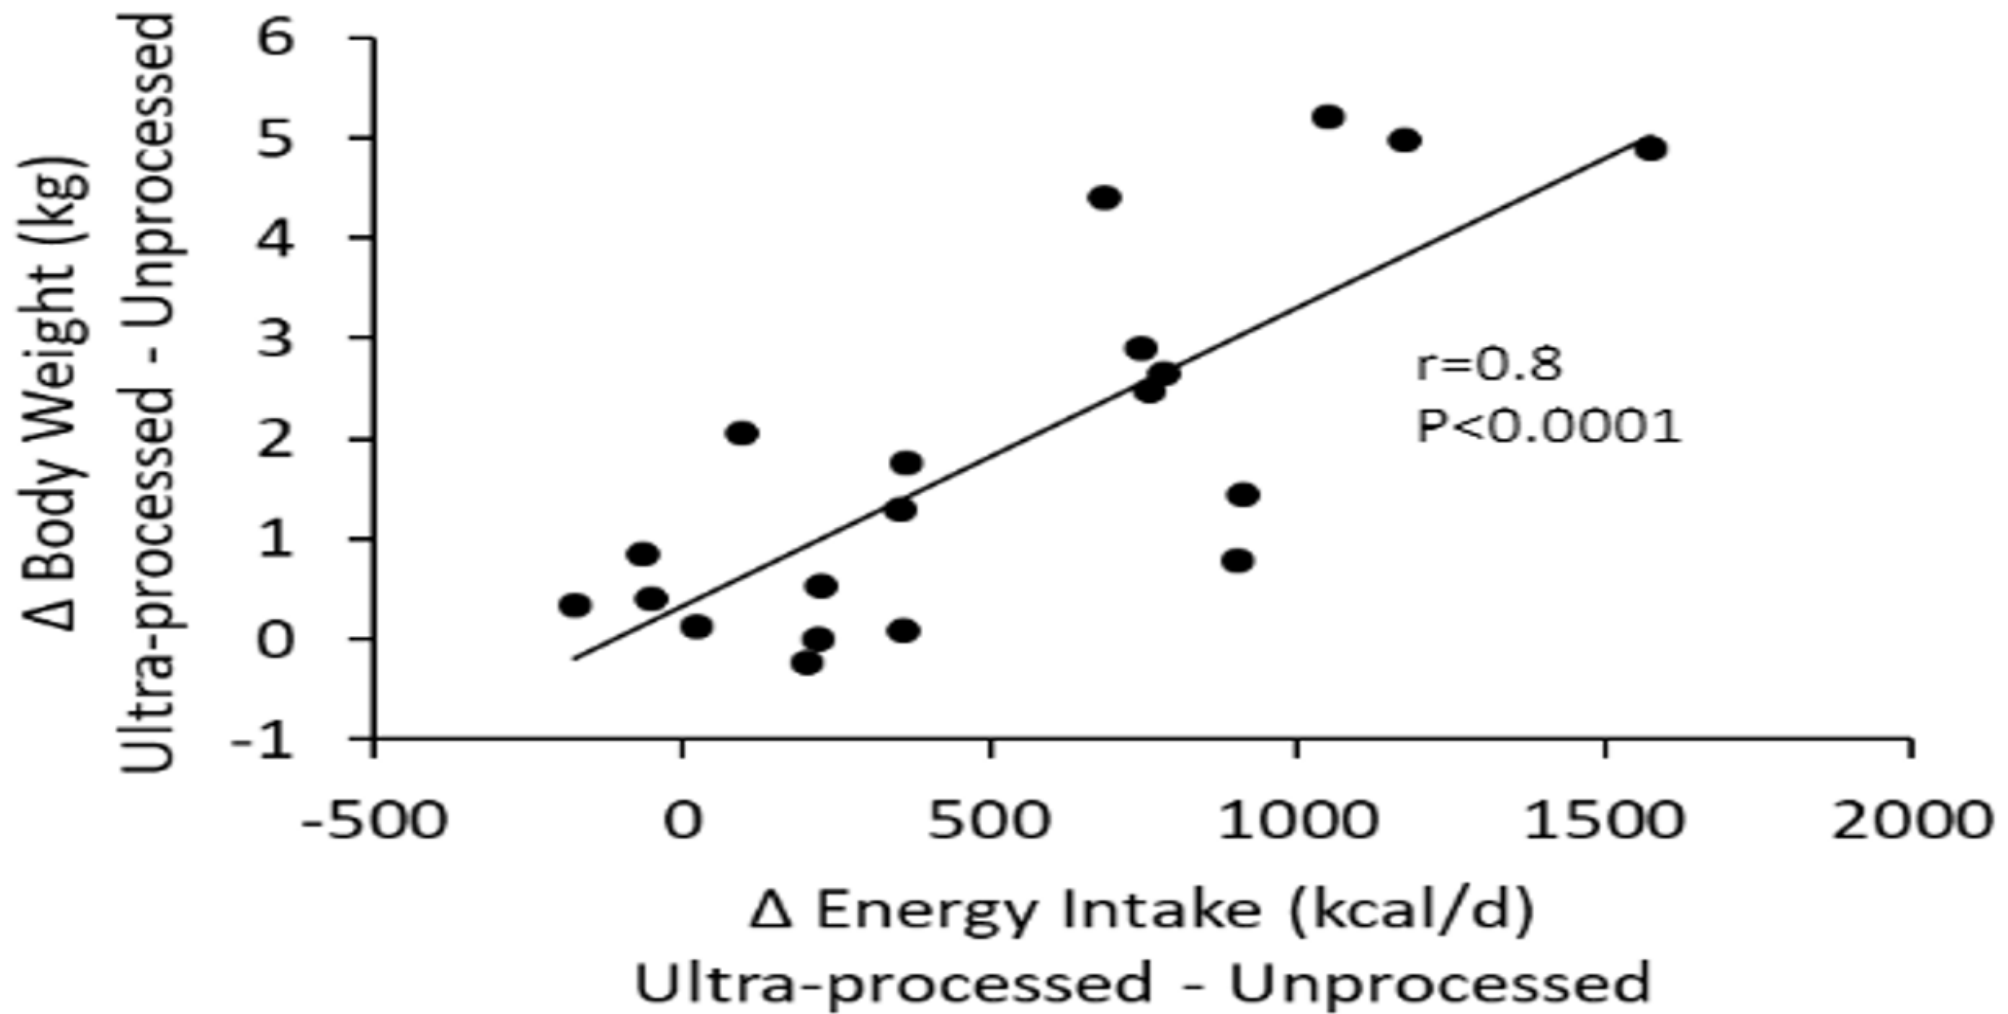

A) Energy intake was consistently higher during the ultra-processed diet. B) Average energy intake was increased during the ultra-processed diet because of increased intake of carbohydrate and fat, but not protein.

Differences in body weight change between the ultra-processed and unprocessed diets were highly correlated with the corresponding energy intake differences.

*Are UPF harmful because of their unbalanced nutrient profile, or because ‘acellular nutrients’, or because of the way they are consumed, or because of additives, or because their effects on the microbiome, or ...?*

*Nutrients*

*Foods  
(more than nutrients!)*

*Meals  
(more than foods!)*

*Eating modes  
(when, where, how?)*

# Why food processing matters to understand diet and health in the 21<sup>st</sup> century

- Diet and health: a complex relationship
- The role of food processing in this relationship
- **The impact of ultra-processed foods on diet quality and on health**
- **Policy implications**

## Actions and policies that are not working:

- Nutrient-based guides and education
- Misleading nutritional labelling
- Cosmetic product reformulation
- Marketing self-regulation

## The real best buys:

- Diet guides and nutrition education that promote real food and real meals
- Fiscal policies that make real food and real meals more affordable than UPF
- Warning labels and strong marketing restrictions on ALL UPF
- A global framework convention on food systems

Many thanks!
